The cable is heart of our product which is made using 316 marine grade stainless steel that comes with premier nylon melt coat. This product can either be fixed to the building structure or it can also be fixed to customized aluminum frames in both vertical and horizontal form.

Invisible Grilles are capable of supporting a tensile impact up to 500 kg which helps to keep your family safe and secure inside the premises.

It is a sleek cable of 2mm diameter, safeguarding children and pets without compromising on your view.

It is an ultimate solution which will provide safety and aesthetics.

Every window or balcony will have an alarm integrated which will work only for that respective fixture.

ALARM

Alarm will be fixed on the walls close to the grilles.

CABLE

Wires of the alarm are connected to two ends of the cable.

SOUND

Once disconnected the sound resonates loudly until switched off.

Balcony is the space in any residence where maximum amount of fun activities happen.

As kids, pets and elderly are the group who have major chances of risk or accidents in this area, providing them a protecting barrier is very important.

Invisible grilles is the best solution for such issues, where people can stay assured without any worries.

They provide both safety and a classy look.

INSTALLATION IN BALCONY

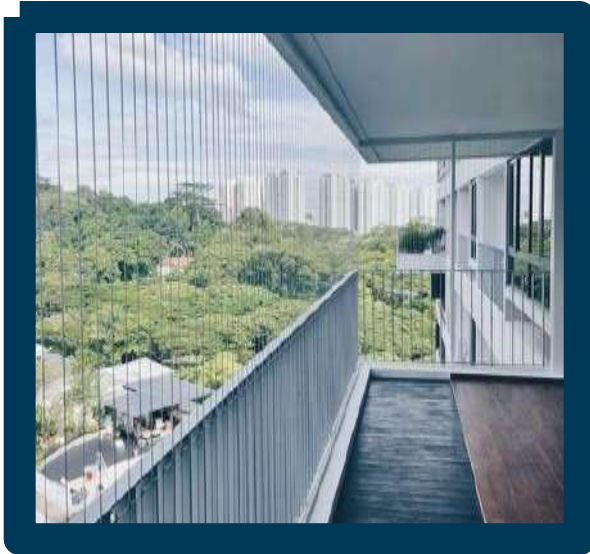

Secure Space Projects

Windows are the most important openings in a built structure as they allow natural light and ventilation inside the building keeping it fresh.

People feel restricted to open the windows these days due to multiple reasons and mostly pigeons.

Similarly applying MS Grilles will obstruct the view as well as disrupt the look of the structure.

For all such problems invisible grilles is the best option.

Railing is an installation similar to staircase installation. But, invisible grilles are preferably necessary when it comes to the terrace area or staircase landing region.

There are situations when people bend down from terrace to view the site and, to avoid any unfortunate situation invisible grille is the best option.

Invisible grilles can also be used as partition between two spaces, irrespective of which people are visually connected.

Our installation team is trained in Singapore and is well experienced.

They have been on field and have been installing grilles from the past 9 years.

They are capable of identifying where to and how to install the products irrespective of any challenges.

As we are in association with Hilti & Klimas, our team uses only German power tools and accessories to install the grilles.
